

SURVEILLANCE UPDATE

Forced to Have Sexual Intercourse: 2005 N.C. Youth Risk Behavior Survey (YRBS)

Percentage of N.C. high school students who have been physically forced to have sexual intercourse, by gender: N.C. YRBS 2005

Percentage of N.C. high school students who have been physically forced to have sexual intercourse, by grade level: N.C. YRBS 2005

Percentage of N.C. high school students who have been physically forced to have sexual intercourse, by race/ethnicity: N.C. YRBS 2005

Percentage of N.C. high school students who felt good about themselves, by gender: N.C. YRBS 2005

Weighted to provide estimates representative of the public high school student population; students who reported having been physically forced to have sexual intercourse when they did not want to. Specific data on 95 percent confidence intervals is at the N.C. YRBS website: www.nchealthyschools.org/data/yrbs.

* NH = Non-Hispanic. ** Caution when interpreting. Results based on small sample size.

The N.C. Youth Risk Behavior Survey (N.C. YRBS) provides a critical source of public health data for understanding the scope of injury-related problems and measuring progress toward overall goals among public school students. N.C. YRBS is a comprehensive statewide sample of 3,200 middle and 3,400 high school students from across the state. Every other spring in odd years, a core set of injury-related questions are asked along with other health and risk-factor questions. Risk-factor variables include information such as academic achievement, seat belt use and physical assault. The sampling scheme is intended to generate a statewide representative sample of weighted data. Increasing school district participation and data utilization are two keys for future success. See the N.C. Healthy Schools website for more information: www.nchealthyschools.org.
